Morbidity and Mortality Weekly Report (MMWR)

Infectious & Emerging Diseases
in the ASEAN Region

With Support by:

Korea Disease Control and
Prevention Agency

in partnership with
Canada

Kemenkes

ASSOCIATION
OF SOUTHEAST
ASIAN NATIONS

This report aims to provide the current situation on infectious and emerging diseases in the ASEAN Region. We collate various information from multiple official sources and publicly available sources and is published every week on Wednesday. ABVC follows Epi-week calendar in its publication. For feedback and/or suggestions, please write to support@aseanbiosurveillance.org

Emerging Diseases

A person wearing a full-body white protective suit, a hood, and a face mask with a filter. They are also wearing black gloves. The person is holding a small, dark object in their gloved hand. The background is blurred, suggesting an indoor setting.

MPOX

Mpox Cases Reported in the ASEAN Region

January 1, 2025 – June 6, 2026

Source:

1. Ministry of Health Cambodia
2. Ministry of Health Republic of Indonesia (<https://infeksiemerging.kemkes.go.id>)
3. WHO Mpox Outbreak: Global Trends, accessed June 9, 2026 (https://worldhealthorg.shinyapps.io/mpx_global/)
4. Communicable Disease Agency, Ministry of Health Singapore, accessed June 9, 2026, <https://www.cda.gov.sg/resources/weekly-infectious-diseases-bulletin-2025/>

Key Findings

- The number of Mpox cases from January 1 to June 6, 2026, are **62 cases** with **two deaths**.
- There were **no new cases of Mpox** in epi-week 22 of 2026.
- **61,299 confirmed cases** of mpox have been reported in **other regions** (other than the **ASEAN** region):

Mpox cases in the ASEAN region in 2025 and 2026 (as of June 6, 2026)

COVID-19

Key Findings

- Recently, the number of **confirmed COVID-19 cases reported to ASEAN are declining** compared to the previous year.
- The number of confirmed COVID-19 cases reported from 1 January 2026 to June 6 2026 are **15,034 cases** with **0.07 % Case Fatality rate (CFR)**
- In May 2026, GISAID genomic surveillance for the latest week continues to show a stable Omicron-only landscape across ASEAN, with no new variant of concern detected. **JN.1** and its monitored descendants (notably **LP.8.1**, **NB.1.8.1**, **KP.3**, **XEC** and **XFG**) remain predominant in Indonesia, the Philippines, Lao PDR, Singapore, Thailand and Vietnam, while in Brunei Darussalam is still largely driven by earlier **BA.*** lineages and Myanmar by **XBB.1.16** and related **XBB** lineages, indicating heterogeneous but overall stable variant patterns across the region.

INFLUENZA

Key Findings

- Recently, most influenza cases among ASEAN Member States had decreased.
- Most of Influenza-like illness (ILI) and severe acute respiratory infection (SARI) cases were decrease among some ASEAN Member States.

Vector-Borne Diseases

DENGUE

Key Findings

- The **ASEAN** region reported **742** new dengue cases in Epi-week 22, 2026.
- The total number of dengue cases from January 1 to June 6, 2026 are **120,061** cases and **161** deaths with **0.13% CFR**.

Trend of Dengue cases in the ASEAN region, 2024 – 2026

Below are trend of dengue cases among ASEAN Member States since January 1, 2024 up to June 6, 2026.

- Data were updated and collected from official sources, which may have a 2-8 weeks delay in reporting. Data must be interpreted cautiously.
*Notified dengue cases only includes severe cases Dengue Hemorrhagic fever (DHF) and Dengue Shock Syndrome (DSS)
**Notified dengue cases only includes Dengue Fever (DF) and DHF

Comparison between Precipitation (Rainfall) and Dengue Cases in the ASEAN region

This summary describes the dengue fever and precipitation patterns shown in the country visualization. It focuses on observed dengue fever cases and rainfall intensity (precipitation) based on data from January 1, 2022 to June 6, 2026.

Across these countries, rainfall patterns and dengue fever cases often appear to follow seasonal trends. Cambodia, Laos, Myanmar, Thailand, and Vietnam show the clearest connection between periods of heavier rainfall and increased dengue activity, with dengue cases generally reaching their highest levels during or close to the rainy season. In Vietnam, this pattern was evident when both rainfall and dengue cases peaked in October 2024. Lao PDR and Myanmar also recorded increases in rainfall and dengue cases around the middle of the year, while Cambodia's dengue cases peaked in July 2025, just before rainfall reached its highest point in August 2025.

Nevertheless, the comparison indicates that higher rainfall does not always lead to more dengue cases. Brunei and Singapore receive frequent or substantial rainfall, yet their dengue case numbers remain comparatively low. Malaysia experienced high and fluctuating rainfall, including a major rainfall peak in November 2025, but dengue cases decreased during that same period. Similarly, Indonesia recorded a sharp rise in dengue cases in March 2024, although this did not coincide with the month of highest rainfall. Overall, rainfall seems to play an important seasonal role in dengue patterns in some countries, but it is not the only factor influencing dengue activity.

Dengue Cases and Precipitation Trends among ASEAN Member States
Data from January 1, 2022 to June 6, 2026 (varies by country)

Weather Data Source: NASA POWER

MALARIA

Key Findings

- The **ASEAN** region reported **168** new malaria cases in Epi-week 22, 2026.
- The total number of malaria cases from January 1 to June 6, 2026 are **236,990** cases and **206** deaths with **0.09%** CFR.

Malaria cases in the ASEAN region

Country	Data as of	Cumulative Cases	New Cases Since Last Week	Cumulative Deaths	CFR
