November 18, 2026 | MMWR 2026-45
Epidemiological Week 45 (November 8 – 14, 2026)

ASEAN BIOLOGICAL THREATS SURVEILLANCE CENTRE

ABVC

Morbidity and Mortality Weekly Report (MMWR)

Infectious & Emerging Diseases in the ASEAN Region

With Support by:

Korea Disease Control and Prevention Agency

In partnership with Canada

Kemenkes

ASSOCIATION OF SOUTHEAST ASIAN NATIONS

This report aims to provide the current situation on infectious and emerging diseases in the ASEAN Region. We collate various information from multiple official sources and publicly available sources and is published every week on Wednesday. ABVC follows Epi-week calendar in its publication. For feedback and/or suggestions, please write to support@aseanbiosurveillance.org

Table of Contents

Executive Summary 2
Emerging Diseases 3
- Mpox 4
- COVID-19 8
- Influenza 10
- Avian Influenza (H5N1) 12
- Hantavirus 12
- Legionellosis 12
- Meningococcal Disease 13
- Poliomyelitis 13

Zoonosis 14
- Rabies 15

Vector-borne Diseases 16
- Dengue 17
- Malaria 19

Vaccine-preventable Diseases 20
- Measles 21

Executive Summary

Epidemiological Week 45 (November 7 - 14, 2026)

- Reported infectious disease activity was primarily concentrated on dengue and malaria, while COVID-19 and influenza showed an overall increasing trend.
- **Dengue: 14,981** new cases were reported this week. The 2026 cumulative total reached **759,146 cases and 1,438 deaths** (CFR: 0.19%). Seasonal patterns varied among Member States. The dengue trend is visibly decreased following the same trend compared to previous years. Some reported data may be delayed.
- **Malaria: 5,787** new cases were reported, bringing the cumulative case to **678,742 cases** (CFR: 0.05%).
- **Rabies: Four** new cases were reported this week. The cumulative case was **525 cases** (CFR: 99.62%).
- **Measles: 686** new cases were reported, with **17,466 cumulative cases** and a CFR of 0.03%. The trend is relatively stable from early 2026 up until this week.
- **COVID-19:** The report records **253,713 cases in 2026** with a CFR of 0.04% and describes lower reported activity than in 2025. Diverse Omicron lineages continued to circulate, with no single lineage predominating across the region.
- **Influenza:** Activity continues to rise generally low, with declining influenza-like illness and severe acute respiratory infection indicators in several Member States.
- **Meningococcal Disease:** One new case was reported this week from Thailand. The cumulative case count is 139 cases (CFR: 32.37%).
- No new cases were reported for mpox, avian influenza (H5N1), legionellosis, hantavirus, or poliomyelitis.

Emerging Diseases

MPOX

Mpox Cases Reported in the ASEAN Region

January 1, 2025 – November 14, 2026

Source:

Key Findings

- The number of Mpox cases from January 1 to November 14, 2026, is **732 cases** with **four deaths**.
- There were **no new cases of Mpox in** Epi-week 45 of 2026.
- **69.363 confirmed cases** of mpox have been reported in **other regions** since 2025 (other than the **ASEAN** region):

Mpox cases in the ASEAN region in 2025 and 2026 (as of November 14, 2026)

ASEAN Member States	Cumulative Cases in 2025	Cumulative Deaths in 2025 (CFR)	Cumulative Cases in 2026	New Cases in Epi-week 45	Cumulative Deaths in 2026 (CFR)

COVID-19

Key Findings

- Recently, the number of **confirmed COVID-19 cases reported to ASEAN are inclining** compared to the previous year at the same epi-week.
- The number of confirmed COVID-19 cases reported from January 1 to November 14, 2026 are **239,839 cases** with **0.04 % Case Fatality rate (CFR).**
- In November 2026**,** the latest reported genomic data show heterogeneous lineage distributions across the ASEAN countries. **Omicron B.1.1.529/BA.*** accounts for the largest share in Brunei Darussalam (76.77%), Malaysia (25.10%) and Thailand (23.19%), while **JN.1** and its sub lineages, excluding current variants under monitoring, lead in Indonesia (39.78%). **LP.8.1** predominates in the Philippines (71.99%), and **XBB.1.16** in Myanmar (52.41%). Singapore's largest share is **XFG** (20.07%), closely followed by **NB.1.8.1** (19.20%). The **"Other"** category represents the largest proportion in Cambodia (29.02%), Lao PDR (28.09%) and Vietnam (23.89%), indicating that no individually listed lineage group accounts for the highest share in these countries.

INFLUENZA

Key Findings

- Influenza activity across ASEAN continues to decline, with regional test positivity downing to approximately 25% in the latest reporting weeks, lesser than the 2025 peak of about 36%, and A(H1N1)pdm09 still the predominant subtype. Because surveillance data are delayed by one week, an ARIMA model fitted to the available weekly data is used to bring the series up to 21 November 2026, so the final point for each country is a model-based forecast rather than an observed value. The forecast uses post COVID-19 available weekly data and is shown to support short-term surveillance interpretation.

Vector-Borne Diseases

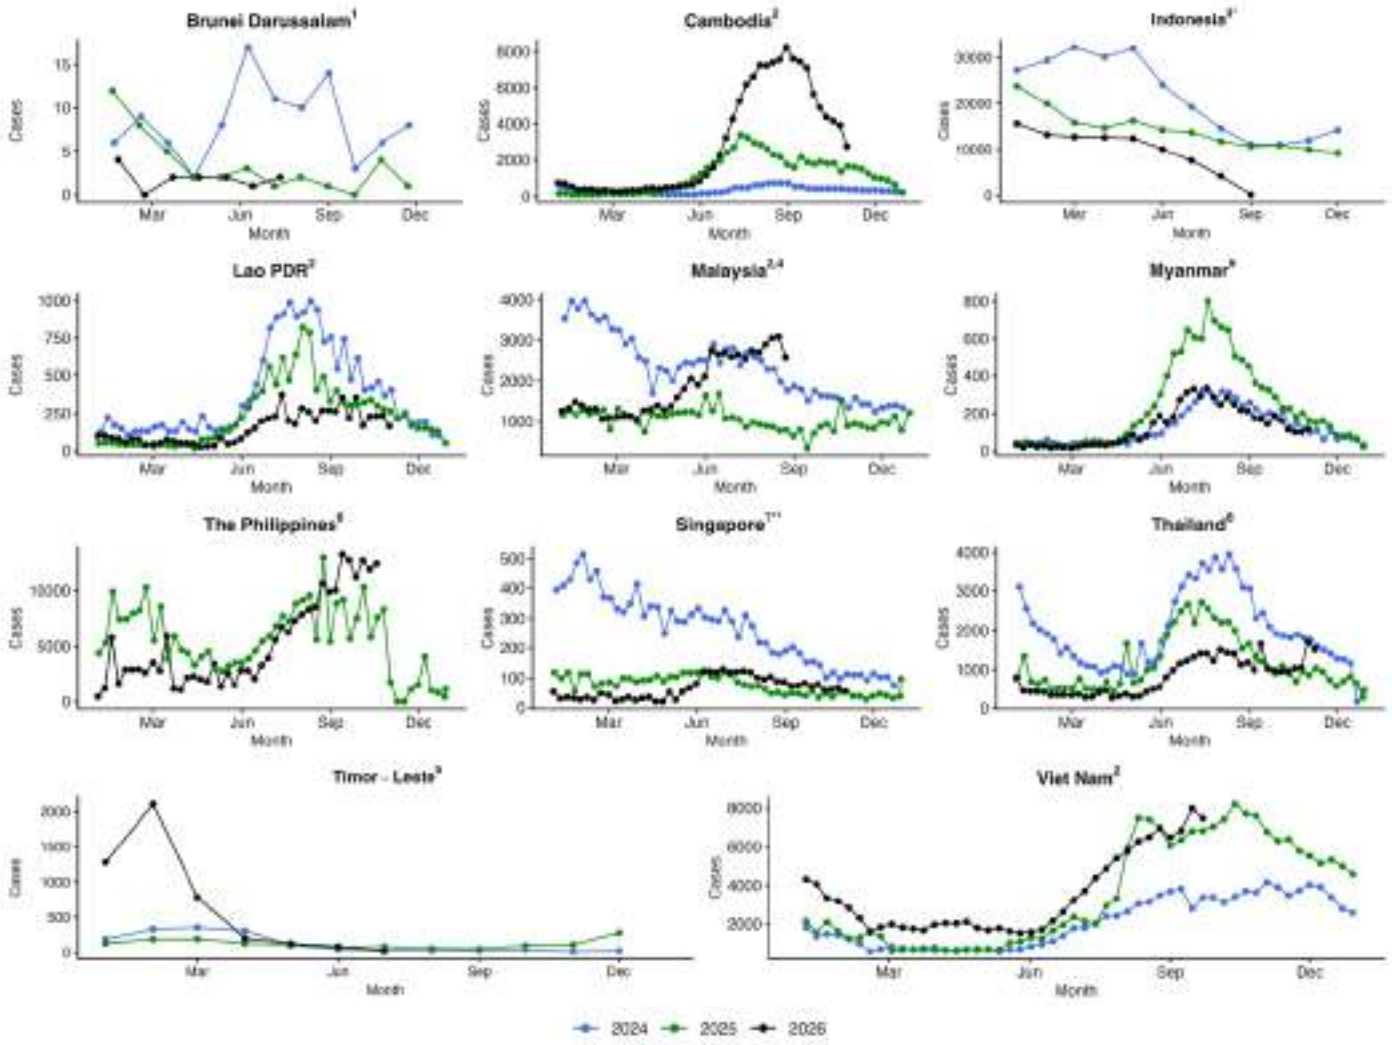

DENGUE

Key Findings

- The **ASEAN** region reported **14,981** new dengue cases in Epi-week 45, 2026.
- The total number of dengue cases from January 1 to November 14, 2026 are **759,146** cases and **1,438** deaths with **0.19% CFR**.

Trend of Dengue cases in the ASEAN region, 2024 – 2026

Below are trend of dengue cases among ASEAN Member States since January 1, 2024 up to November 14, 2026.

- Data were updated and collected from official sources, which may have a 2-8 weeks delay in reporting. Data must be interpreted cautiously.
*Notified dengue cases only includes severe cases Dengue Hemorrhagic fever (DHF) and Dengue Shock Syndrome (DSS)
**Notified dengue cases only includes Dengue Fever (DF) and DHF

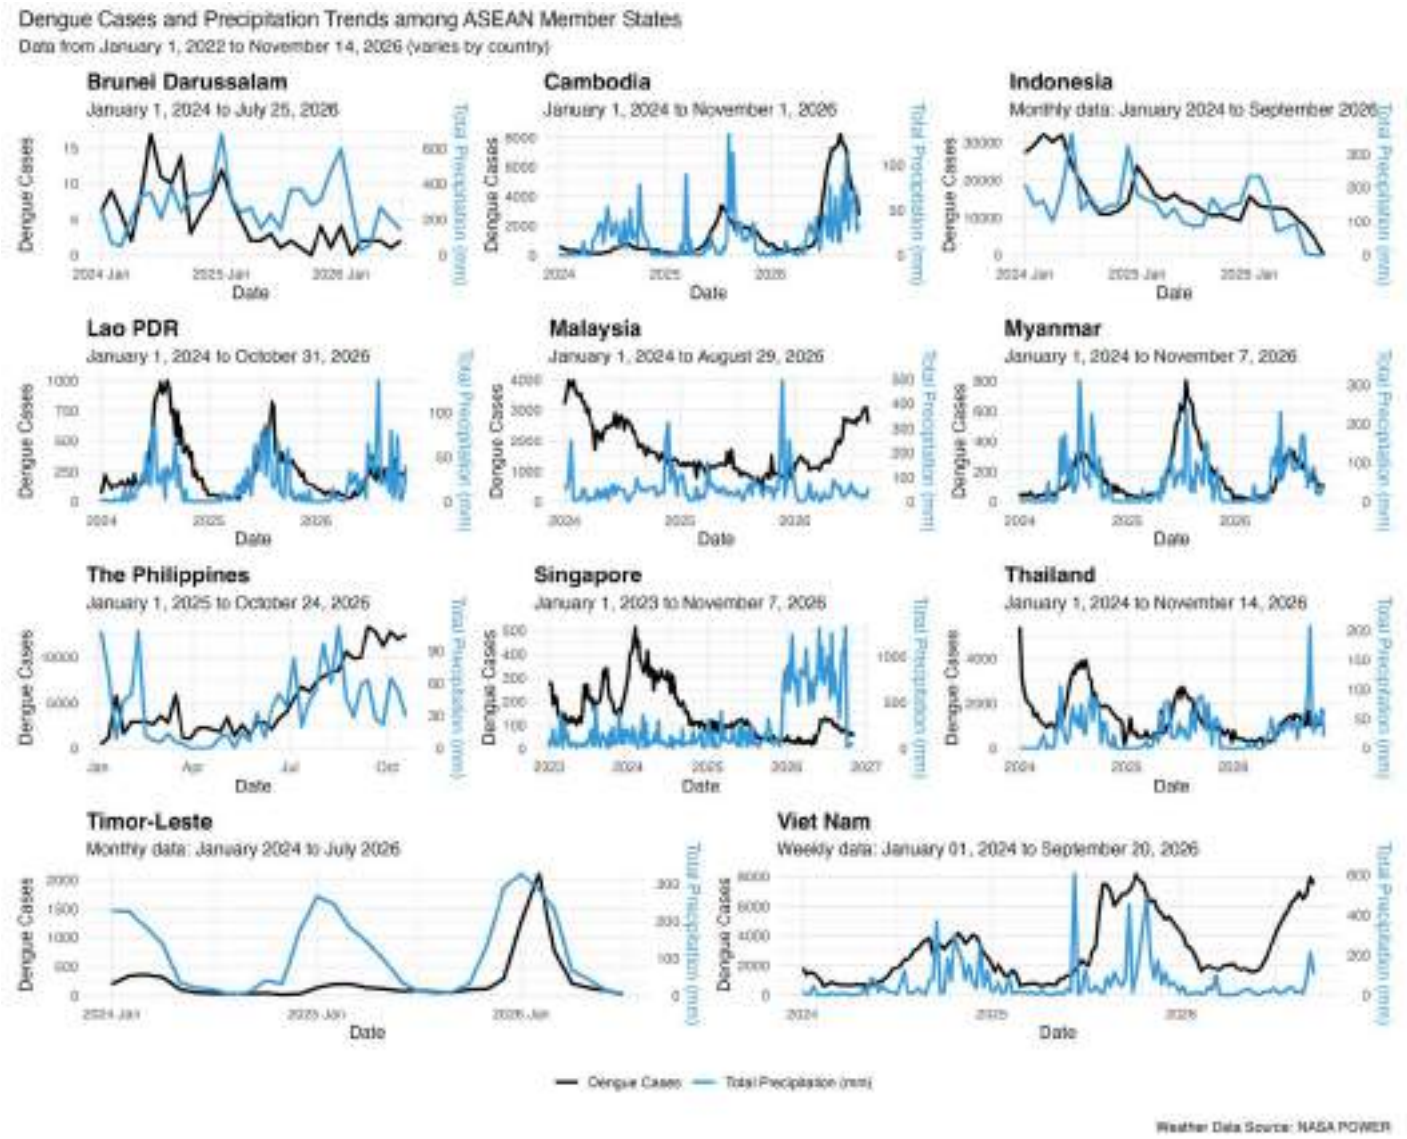

Comparison between Precipitation (Rainfall) and Dengue Cases in the ASEAN region

This summary describes the dengue fever and precipitation patterns shown in the country visualization. It focuses on observed dengue fever cases and rainfall intensity (precipitation) based on data from January 1, 2022 to November 14, 2026.

Dengue cases and precipitation showed varied temporal patterns across ASEAN Member States. Cambodia, Lao PDR, Myanmar, and Thailand generally experienced increases in dengue activity during or following wetter periods, although rainfall and dengue peaks did not consistently coincide. Malaysia and the Philippines also showed periods of overlapping increases, but the relationship was less consistent.

Indonesia's monthly cases peaked in March 2024 before generally declining. Timor-Leste experienced a sharp increase in early 2026, followed by a substantial decline, while Viet Nam showed recurrent weekly increases through September 2026. Their alignment with precipitation requires reassessment using the updated plots. Brunei Darussalam and Singapore showed less consistent correspondence between rainfall fluctuations and dengue activity.

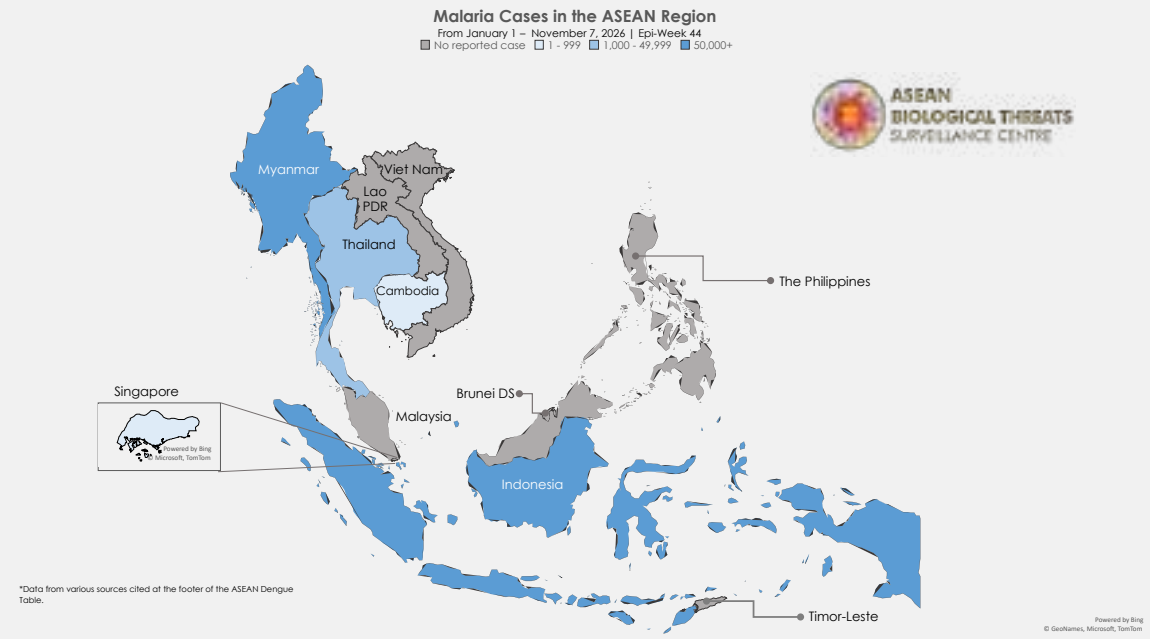

Overall, precipitation provided seasonal context for dengue activity, but the observed patterns differed across countries and years. These descriptive observations do not establish causation. Comparisons should also account for differences in reporting periods, weekly versus monthly aggregation, population size, and the geographic coverage of precipitation estimates.

MALARIA

Key Findings

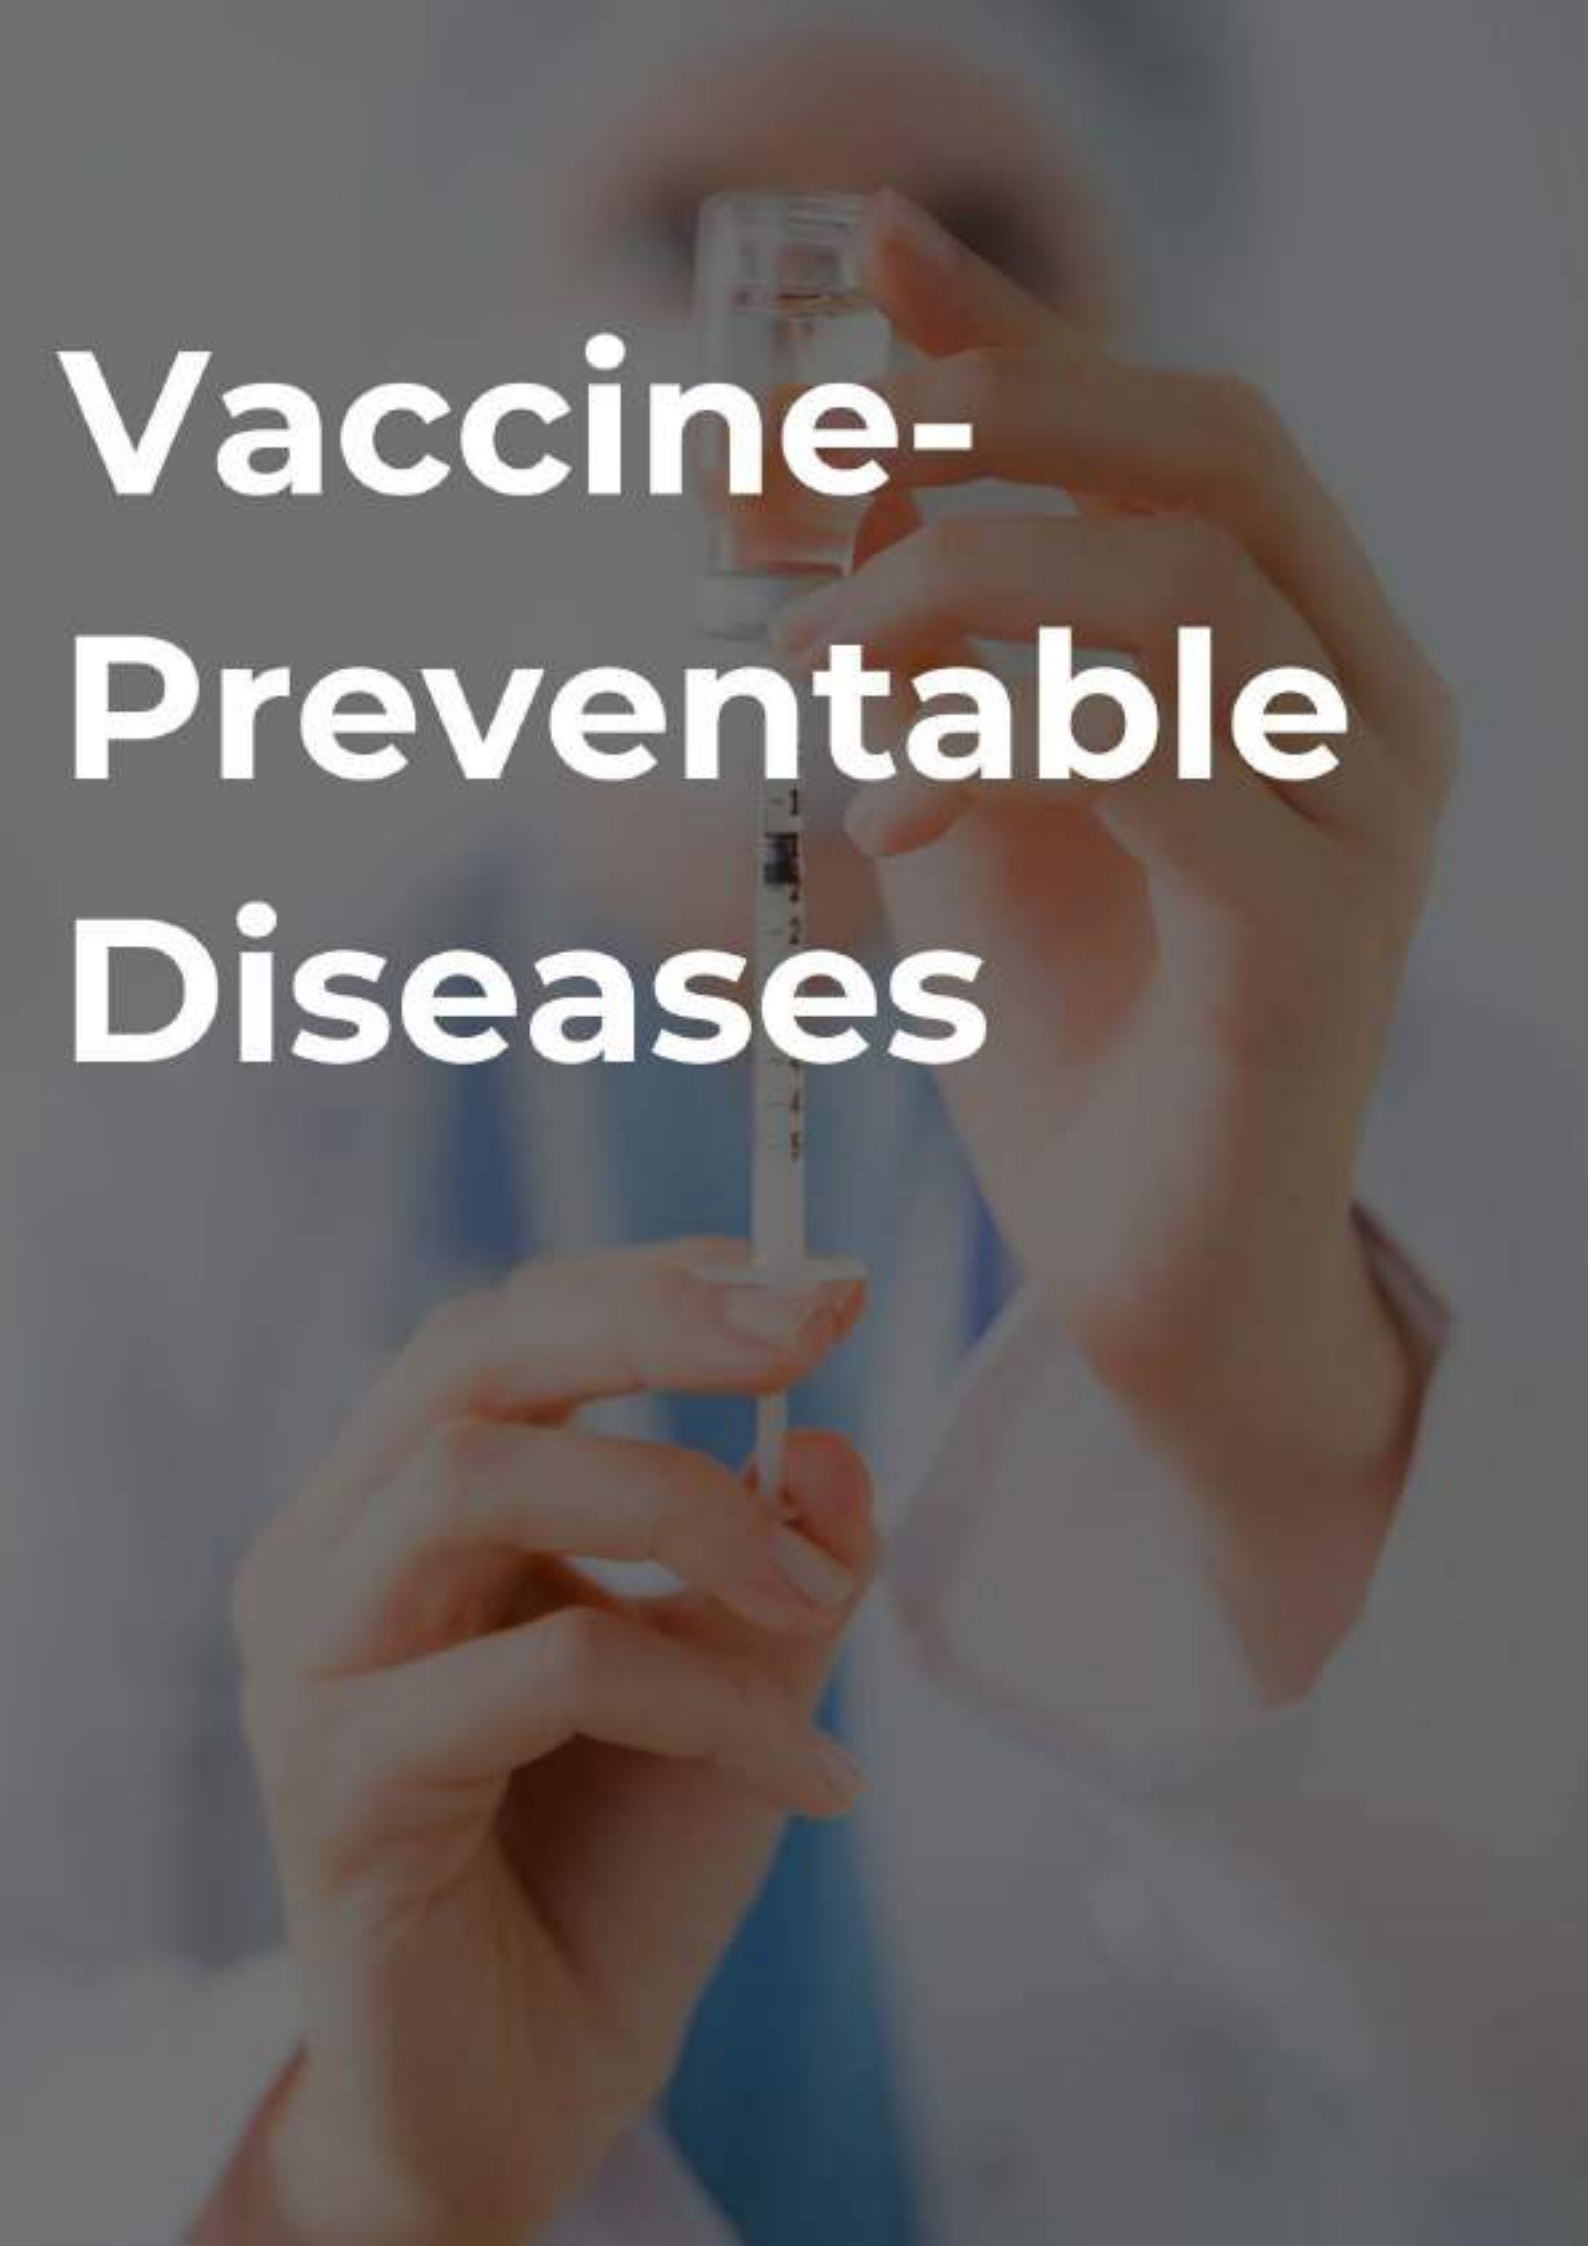

- The **ASEAN** region reported **5,787** new malaria cases in Epi-week 45, 2026.
- The total number of malaria cases from January 1 to November 17, 2026 are **678,742** cases and **317** deaths with **0.05%** CFR.
