Morbidity and Mortality Weekly Report (MMWR)

Infectious & Emerging Diseases
in the ASEAN Region

With Support by:

Korea Disease Control and
Prevention Agency

in partnership with
Canada

Kemenkes

ASSOCIATION
OF SOUTHEAST
ASIAN NATIONS

This report aims to provide the current situation on infectious and emerging diseases in the ASEAN Region. We collate various information from multiple official sources and publicly available sources and is published every week on Wednesday. ABVC follows Epi-week calendar in its publication. For feedback and/or suggestions, please write to support@aseanbiosurveillance.org

Executive Summary

Epidemiological Week 42 (October 18 - 24, 2026)

- Reported infectious-disease activity was concentrated in dengue and malaria. Meanwhile the COVID-19 and influenza sections described generally increasing in activity.
- **Dengue:** **1,101** new cases were reported this week. The 2026 cumulative total reached **616,276 cases and 1,233 deaths** (CFR: 0.20%). Seasonal patterns varied among Member States. The dengue trend is visibly decreased following the same trend compared to previous years. Some reported data may be delayed.
- **Malaria:** **21,275** new cases were reported, bringing the cumulative total to **666,438 cases** (CFR: 0.05%).
- **Rabies:** One new cases were reported in Malaysia. The cumulative total was **474 cases** (CFR: 99.79%).
- **Measles:** 13 new cases were reported, with **16,552 cumulative cases** and a CFR of 0.04%. The trend is relatively stable from early 2026 up until this week.
- **COVID-19:** The report records **222,223 cases in 2026** with a CFR of 0.04% and describes lower reported activity than in 2025. Diverse Omicron lineages continued to circulate, with no single lineage predominating across the region.
- **Influenza:** Activity was continues to rise generally low, with declining influenza-like illness and severe acute respiratory infection indicators in several Member States.
- No new cases were reported for mpox, legionellosis, meningococcal disease, avian influenza (H5N1), hantavirus, or poliomyelitis.

Emerging Diseases

A person wearing a full-body white protective suit, including a hood and a face mask with a mesh filter. They are holding a black, cylindrical object in their gloved hand. The background is a blurred laboratory or clinical setting.

MPOX

Mpox Cases Reported in the ASEAN Region

January 1, 2025 – October 24, 2026

Source:

Key Findings

- The number of Mpox cases from January 1 to October 24, 2026, are **563 cases** with **four deaths**.
- There were **no new cases of Mpox** in Epi-week 42 of 2026.
- **68.657 confirmed cases** of mpox have been reported in **other regions** since 2025 (other than the **ASEAN** region):

Mpox cases in the ASEAN region in 2025 and 2026 (as of October 24, 2026)

COVID-19

Key Findings

- Recently, the number of **confirmed COVID-19 cases reported to ASEAN are declining** compared to the previous year.
- The number of confirmed COVID-19 cases reported from January 1 to October 24, 2026 are **227,022 cases** with **0.04 % Case Fatality rate (CFR)**.
- In October 2026, the latest reported genomic data show heterogeneous lineage distributions across the ASEAN countries. **Omicron B.1.1.529/BA.*** accounts for the largest share in Brunei Darussalam (76.77%), Malaysia (25.10%) and Thailand (22.32%), while **JN.1** and its sub-lineages, excluding current variants under monitoring, lead in Indonesia (39.78%). KP.3 and its sub-lineages, excluding **KP.3.1.1**, predominate in Lao PDR (52.04%), **XBB.1.16** in Myanmar (52.41%) and **LP.8.1** in the Philippines (71.99%). Singapore's largest share is **XFG** (20.14%), closely followed by **NB.1.8.1** (19.43%). The "Other" category accounts for the highest proportion in Cambodia (29.46%), narrowly exceeding **B.1.1.529/BA.*** (29.41%), and in Vietnam (29.39%), followed by BA.3.2 (18.84%) and **B.1.1.529/BA.*** (18.81%).

INFLUENZA

Key Findings

- Influenza activity across ASEAN continues to rise, with regional test positivity reaching approximately 40% in the latest reporting weeks, exceeding the 2025 peak of about 36%, and A(H1N1)pdm09 now the predominant subtype. Because surveillance data are delayed by one week, an ARIMA model fitted to the available weekly data is used to bring the series up to 31 October 2026, so the final point for each country is a model-based forecast rather than an observed value. The forecast uses post COVID-19 available weekly data and is shown to support short-term surveillance interpretation.

- Data were updated and collected from official sources, which may have a 2-8 weeks delay in reporting. Data must be interpreted cautiously.

*Notified dengue cases only includes severe cases Dengue Hemorrhagic fever (DHF) and Dengue Shock Syndrome (DSS)

**Notified dengue cases only includes Dengue Fever (DF) and DHF

Comparison between Precipitation (Rainfall) and Dengue Cases in the ASEAN region

This summary describes the dengue fever and precipitation patterns shown in the country visualization. It focuses on observed dengue fever cases and rainfall intensity (precipitation) based on data from January 1, 2022 to October 24, 2026.

Overall, the analysis suggests that dengue activity across the countries shown is highly seasonal, with several countries experiencing case increases during or shortly after periods of elevated rainfall. This pattern is most apparent in Lao PDR, Myanmar, Thailand, Timor-Leste, and Viet Nam, where dengue peaks broadly coincide with rainy periods or follow rainfall increases. In Cambodia, a major dengue increase occurred in mid-2025, with weekly cases rising sharply to more than 3,000 following periods of increased precipitation. In Viet Nam, dengue cases rose markedly in mid-2024 alongside increasing precipitation, peaking during the wetter months before declining into 2025. Timor-Leste, with data available for early 2026, showed dengue cases peaking after relatively high rainfall early in the year, followed by a decline as precipitation decreased.

Other countries showed weaker or less consistent visual alignment. Indonesia had very high dengue activity in early 2024, followed by a gradual decline despite continued rainfall variability. Malaysia also showed a declining dengue trend over time, with rainfall spikes not consistently followed by comparable increases in cases. Singapore experienced a large dengue peak in early 2024, while later periods of high precipitation did not produce a similarly large increase. Brunei Darussalam had relatively low case counts overall, with no clear consistent relationship between rainfall and dengue activity.

MALARIA

Key Findings

- The **ASEAN** region reported **11,275** new malaria cases in Epi-week 42, 2026.
- The total number of malaria cases from January 1 to October 24, 2026 are **666,438** cases and **316** deaths with **0.05%** CFR.

Malaria cases in the ASEAN region

A close-up photograph of a person wearing a white lab coat, using a syringe to draw vaccine from a small glass vial. The person's hands are visible, and the syringe is held vertically. The background is slightly blurred, showing more of the lab coat and the person's arms. The overall tone is professional and clinical.

Vaccine- Preventable Diseases

MEASLES

Key Findings

- The **ASEAN** region reported 13 new measles cases in Epi-week 42, 2026.
- The total number of measles cases from January 1 to October 24, 2026 are **16,552** cases with **0.04%** CFR.

Trend of Measles cases in the ASEAN region, 2024 – 2026

Below are trend of measles cases among ASEAN Member States since January 1, 2024 up to October 24, 2026.
