Media Monitoring for Infectious and Emerging Diseases

GLOBAL & ASEAN REGION

September 10 – 11, 2026

This report is based on media monitoring of infectious and emerging diseases globally and within ASEAN Member States, to enhance pandemic and epidemic preparedness and response in the ASEAN Region. We publish this report three times a week.

Regional Situation

COVID-19

- **Thailand:** The Epidemiology Division reported 9,754 COVID-19 cases and five deaths nationwide during epi-week 37 of 2026, including 9,254 outpatients and 500 inpatients (PPTVHD36, 2026). This brings the cumulative total to 125,554 cases and 21 deaths. [\[Full article\]](#)

Dengue

- **Indonesia:** Kaur District, Bengkulu Province, reported 12 dengue cases in Semidang Gumay Subdistrict, on September 9, 2026 (RRI, 2026). Cases were laboratory-confirmed at Kaur Regional Hospital. Authorities conducted fogging in affected residential areas and public facilities. Residents were advised to eliminate mosquito-breeding sites, clean water containers, and promptly report suspected cases. [\[Full article\]](#)
- **Malaysia** reported 65,979 dengue cases as of epi-week 35 in 2026, a 66% increase from 39,616 cases during the same period in 2025 (Dengue Visual Atlas, 2026). Dengue deaths increased by 93.8%, from 32 to 62. Control measures included large-scale community activities in severely affected areas and implementation of the *Wolbachia* mosquito programme. [\[Full article\]](#)
- The **Philippines:** Albay Province declared a state of calamity on September 10, 2026, following 1,785 cases reported with 14 deaths (Rappler, 2026). Legazpi City recorded the highest number of active cases (378) and five deaths, followed by Bacacay (254 cases) and Daraga (188 cases, two deaths). Emergency response measures were activated. [\[Full article\]](#)

Manila reported 28 new dengue cases on September 9, 2026, bringing the cumulative total to 2,782 cases, with 10 dengue-related deaths (Manila Bulletin, 2026). The Manila Health Department continued to urge residents to eliminate mosquito-breeding sites and seek immediate medical care if fever or other dengue symptoms develop. [\[Full article\]](#)

- **Viet Nam:** Ho Chi Minh City recorded 1,338 dengue cases during epi-week 36 (September 3 – 9, 2026), bringing the total to 31,032 cases (Báo Tin tức, 2026). Weekly cases exceeded 1,000 for five consecutive weeks. Authorities recommend weekly elimination of mosquito-breeding sites, mosquito-bite prevention, coordinated outbreak response, and vaccination for eligible individuals. [[Full article](#)]

Hand, Foot and Mouth Disease (HFMD)

- **Viet Nam:** Vĩnh Long Province reported 53 new HFMD cases during epi-week 36, a decrease of more than 40% from the beginning of the year (Vietnam.vn, 2026). Authorities strengthened disease surveillance, early detection, outbreak control, and timely response, in coordination with local authorities to prevent wider transmission. [[Full article](#)]

Leptospirosis

- The **Philippines:** Zambales Province, Central Luzon (Region III), reported 31 leptospirosis cases from August 4–September 2, 2026, amid heavy rainfall and persistent flooding (Tribune, 2026). Subic reported the highest number (15), followed by Cabangan and Castillejos (three each). The Provincial Health Office continued surveillance through its Epidemiology and Surveillance Unit. [[Full article](#)]

Manila reported 84 new leptospirosis cases on September 10, 2026, bringing the total to 1,178 cases, with 39 deaths (RMN, 2026). Manila Health Department measures included free medical consultations and doxycycline, with flood-affected individuals advised seeking medical care if symptomatic. [[Full article](#)]

Quezon City reported 812 leptospirosis cases and 48 deaths as of September 9, 2026, a 40% increase from the same period in 2025 (Remate, 2026). Cases remained above the epidemic threshold since epi-week 34. Residents, particularly those exposed to floods, were advised to avoid floodwater and seek early medical consultation if exposed or symptomatic. [[Full article](#)]

Measles

- **Indonesia:** Sumbawa District, West Nusa Tenggara Province, has confirmed 34 measles cases this year, prompting health authorities to intensify surveillance, case investigation, and immunization activities (Suara NTB, 2026). Most cases were detected among children, and officials have urged parents to ensure their children receive complete measles vaccination to prevent further transmission. [[Full article](#)]

Melioidosis

- **Viet Nam:** Quang Ninh Province reported a severe melioidosis case in a 53-year-old patient admitted to hospital with progressive dyspnea, followed by severe pneumonia, sepsis, and respiratory failure (aFamily, 2026). Blood and sputum cultures confirmed *Burkholderia pseudomallei*. Public health advice emphasized prompt medical evaluation and avoiding unidentified or unprescribed injections at home. [[Full article](#)]

Rabies

- **Indonesia:** Bima District, West Nusa Tenggara Province, reported one confirmed rabies death in 2026 in a 48-year-old woman who was bitten by a stray dog (Kompas, 2026). From January to early September, 312 animal-bite exposures were reported. All victims received medical care, including wound management, vaccination, and rabies immunoglobulin for high-risk exposures. [\[Full article\]](#)

Tuberculosis (TB)

- **Indonesia:** Jombang District, East Java Province reported approximately 1,500 TB cases among 3,000 residents screened through a mobile screening programme from April to September 2026 (Radar Jombang, 2026). All identified patients are receiving treatment. Public health measures included active mobile screening, free treatment, early detection, and contact-risk awareness. [\[Full article\]](#)

Global Situation

Chikungunya

- The **United States (US)** reported 89 travel-associated chikungunya cases among state residents so far in 2026, plus one U.S. territory case, with no locally acquired cases or deaths (Medical Daily, 2026). Authorities have intensified public health measures including mosquito precautions, travel vaccination, and prompt evaluation of symptomatic travelers. [\[Full article\]](#)

COVID-19

- **Japan:** Aomori Prefecture reported 66 new COVID-19 cases during August 31 – September 6, based on surveillance from 52 designated medical institutions (Daily Tohoku, 2026). This was 36 more cases than the previous week, while the weekly rate increased by 0.69 to 1.27 cases per designated facility. This marked the first increase in seven weeks. [\[Full article\]](#)

Dengue

- **Bangladesh** reported 1,492 new dengue hospitalizations and 6 additional dengue-related deaths in the past 24 hours ending September 10, 2026 (The Business Standard, 2026). The increase highlights continued dengue transmission nationwide, with authorities urging the public to eliminate mosquito breeding sites and seek prompt medical care for suspected dengue symptoms. [\[Full article\]](#)

Chattogram district reported 585 dengue cases during the first nine days of September 2026, reflecting a continued rise in transmission amid the ongoing dengue season (The Daily Star, 2026). Health authorities have intensified surveillance, mosquito-control operations, and public awareness activities, while urging residents to eliminate mosquito breeding sites and seek prompt medical care for suspected dengue symptoms. [\[Full article\]](#)

- **India:** Rohtak District, Haryana, reported 13 dengue cases as of September 8, 2026, including eight urban and five rural cases (The Times of India, 2026). Patients comprised eight women and five men; one was hospitalized and 12 were recovering at home. Health authorities screened 2,485 people, collected blood samples from family members, intensified surveillance, and continued mosquito-breeding prevention measures. [\[Full article\]](#)

Patna District, Bihar, reported nine new dengue cases within 24 hours, bringing the total to more than 215 cases in September 2026 (Live Hindustan, 2026). A 28-year-old man died following suspected dengue infection. The latest death remains unconfirmed pending investigation. Officials reported 36 confirmed cases during September 1 – 8 and urged vigilance through November due to mosquito-breeding risks. [\[Full article\]](#)

- The **United States (US):** Hillsborough County, Florida, reported 59 confirmed dengue cases and one suspected dengue-related death in an 80-year-old woman as of September 2026 (WFLA, 2026). The Florida Department of Health is investigating the death for possible association with dengue virus infection. County mosquito management services continued surveillance and mosquito control, while residents were advised to prevent mosquito exposure. [\[Full article\]](#)

Malaria

- **India:** Ambala district, Haryana, reported eight malaria cases so far in 2026, including seven with travel histories (News 18, 2026). One locally acquired case was reported in Nayagaon, where mosquito larvae were detected in stagnant rainwater at the patient's residence. Authorities conducted door-to-door fever surveillance, larval surveillance, and public awareness activities. [\[Full article\]](#)
- **Republic of Korea (ROK):** Gyeonggi Province issued a malaria alert for Yeoncheon County on September 9, 2026, following the first cluster since the nationwide malaria advisory on June 22 (Yonhap News Agency, 2026). Authorities plans epidemiological investigations, identify mosquito breeding sites and exposed individuals, strengthen vector control, and recommend prompt testing for suspected cases. [\[Full article\]](#)

Measles

- **Bangladesh:** Seven additional children died with measles-like symptoms within 24 hours, bringing combined laboratory-confirmed and suspected measles-related deaths to 1,009 (Daily New Nation, 2026). As of the latest report, 19,933 laboratory-confirmed and 168,745 suspected cases have been recorded nationwide. The government plans another measles vaccination campaign from September 25 and is strengthening peripheral hospitals, isolation capacity, and mobile healthcare services. [\[Full article\]](#)
- **Sweden:** During August 2026, 43 measles cases were reported in connection with an outbreak linked to the Urkult festival in Västernorrland County. Most cases occurred among unvaccinated individuals (Sveriges Radio, 2026). Health authorities launched extensive contact tracing and outbreak investigations to identify and monitor exposed persons. This largest measles clusters in recent years has prompted renewed calls for MMR vaccination to prevent further transmission. [\[Full article\]](#)

- The **United States (US)**: Pennsylvania reported 624 measles cases across 37 counties as of September 9, 2026, including 91 new cases during the preceding seven days (6abc Philadelphia, 2026). The outbreak resulted in 109 hospitalizations, with no deaths reported. Vaccination efforts intensified, with 46,000 vaccinations administered in August and an additional 6,200 provided through state-run pop-up clinics. [\[Full article\]](#)

Kentucky reported six new measles cases during the past week, bringing the statewide total to 45 cases during the summer 2026 outbreak (West Kentucky Star, 2026). Christian County reported 18 cases, followed by Trigg (8) and Jessamine (5); three patients required hospitalization. All cases occurred among unvaccinated individuals. The Kentucky Department for Public Health reported the highest statewide case count in 35 years. [\[Full article\]](#)

Mpox

- **Hong Kong (SAR)**: Pok Oi Hospital in Yuen Long District isolated a confirmed mpox case involving a 31-year-old man who developed fever, sore throat, mild diarrhoea, oral ulcers, and a generalized rash on September 4, 2026 (RTHK, 2026). He reported high-risk contact during the incubation period. Since 2022, Hong Kong has recorded 103 male cases. Authorities recommend vaccination for high-risk groups and avoiding close contact with suspected cases. [\[Full article\]](#)
- **Pakistan**: Sindh Province confirmed an mpox case in Karachi on September 10, 2026, involving a 45-year-old man tested positive by PCR after developing a rash (Xinhua News Agency, 2026). He was hospitalized and received treatment. The case brings Sindh's 2026 total to 42 confirmed cases, including 14 in Karachi. Authorities continue surveillance and monitoring to prevent further transmission. [\[Full article\]](#)
- **Spain**: A confirmed mpox case was reported in a patient hospitalized in Marbella, Málaga (La Opinión de Málaga, 2026). The patient was treated in the Cardiology ward due to space constraints. Andalusian health authorities stated that appropriate infection-control protocols and measures were in place and that there was no identified risk of transmission. [\[Full article\]](#)

Pertussis

- **Finland**: South Ostrobothnia reported more than 10 pertussis cases since late July, mainly in Suupohja, with sporadic cases reported elsewhere (Yle, 2026). Cases occurred sporadically and in small clusters. The regional health authority recommended early antibiotic treatment and vaccination, including during pregnancy. [\[Full article\]](#)

West Nile Virus (WNV)

- **Italy**: Health authorities confirmed 1 new human WNV case in Grosseto Province, bringing the cumulative total in Tuscany to 17 cases this year (Toscana Media News, 2026). The case was identified through ongoing surveillance as West Nile virus activity continues in central Italy. Authorities have reinforced mosquito-control measures, epidemiological monitoring, and public health advisories. [\[Full article\]](#)

- **Netherlands:** Health authorities reported 18 human WNV infections and 3 deaths nationwide in the 2026 transmission season (VRT NWS, 2026). Most cases involved neuroinvasive disease, and investigations indicated local mosquito-borne transmission. Authorities have intensified surveillance, mosquito monitoring, and public health messaging, particularly for older adults and people with underlying health conditions. [\[Full article\]](#)
- **Spain:** A new severe WNV case was reported in Coria del Río, bringing the cumulative number of infections in Seville Province to 57 cases in the 2026 transmission season (Sevilla Confidencial, 2026). The latest patient was hospitalized with neuroinvasive disease, underscoring the risk of severe illness. Health authorities have continued enhanced surveillance and public health advisories, urging residents to avoid mosquito bites and reduce breeding sites around homes. [\[Full article\]](#)

Extremadura confirmed 3 new WNV cases, bringing the region's cumulative total to 43 cases in 2026 (Hoy, 2026). The new infections were identified through ongoing surveillance amid continued regional transmission. Authorities have maintained enhanced epidemiological monitoring, mosquito-control measures, and public health measures. Residents are urged to avoid mosquito bites and eliminate breeding sites to reduce the risk of further infections. [\[Full article\]](#)

- The **United States (US):** Yolo County reported its first WNV death of 2026, involving a resident with neuroinvasive form of the disease (CBS News, 2026). Health authorities also confirmed two additional neuroinvasive WNV cases, bringing the county's total to three confirmed human cases and one death in 2026. Officials urged residents to reduce mosquito exposure through repellents, protective clothing, and elimination of standing water. [\[Full article\]](#)

As of early September 2026, **California** reported 86 human West Nile virus cases and 6 deaths statewide (Medical Daily, 2026). Of those, 22 were reported in Los Angeles County, making it the most affected county in the state. Authorities are urging residents to use insect repellent, wear protective clothing, and eliminate standing water to reduce mosquito exposure. [\[Full article\]](#)

Montrose County, Colorado, reported 4 human WNV cases and 1 death in the 2026 transmission season (Western Slope Now, 2026). Health officials noted ongoing mosquito activity and urged residents to take preventive measures, including using insect repellent, wearing protective clothing, and eliminating standing water to reduce exposure to infected mosquitoes.
