COVID-19: Highlights and Situation Overview

COVID-19 Global Updates

- **Worldwide**, over 697 million cases and over 6 million deaths have been attributed to COVID-19.
- **Bulgaria** has reported 366 new confirmed cases of COVID-19 in the last 24 hours since November 7, with 3,693 tests performed (novinite.com, 2023). Eight patients have died, and there are 476 hospitalized cases. 315 people have recovered, and there are 5,510 active cases. 1,021 doses of vaccines have been administered, and 38,569 people have died due to the virus. [\[Full article\]](#)
- **Canada:** Ottawa Public Health reported five more deaths and 211 new cases due to COVID-19 over the past seven days from November 6, bringing the total to 1,133 (Staff Reporter, 2023). As of November 7, 60 confirmed patients were admitted to Ottawa hospitals, and 13 new outbreaks were reported in institutional settings, with 31 ongoing. The rate of COVID-19 infection per 100,000 people reported in the previous seven days from November 6 was 20.2%. The Haliburton, Kawartha, Pine Ridge District Health Unit has reported two COVID-19-related deaths and 44 new lab-confirmed cases, including two new hospitalizations, over the past week from November 8 (Davis, 2023). The health unit's COVID-19 dashboard shows 58 active cases, with 40 in Kawartha Lakes, 18 in Northumberland County, and none in Haliburton County. The number of active cases is an "underestimate" of actual community spread due to restrictions in provincial testing. Since the pandemic began, there have been 105 deaths reported in Kawartha Lakes, 11 in Haliburton County, and 65 in Northumberland County. The health unit notes that 64.5% of all reported deaths are of people aged 80 and older, while another 22.2% are in the 70-79 age bracket. There have been 581 hospitalized cases since the pandemic was declared in 2020. [\[Full article \(Staff Reporter, 2023\)\]](#) [\[Full article \(Davis, 2023\)\]](#)
- **India** has seen a single-day increase in new coronavirus infections, with 176 active cases and 533,295 deaths on November 8 (PTI, 2023). The country's COVID-19 tally now stands at 45 million, with 44,467,937 people recovering and a national recovery rate of 98.81%. The case fatality rate stands at 1.19%. 2.2 billion doses of COVID-19 vaccine have been administered so far. [\[Full article\]](#)
- **Pakistan:** Six new coronavirus cases were reported in Pakistan over the past week from November 8, with 3,674 COVID-19 tests conducted and a case positivity ratio of 0.16% (Desk, 2023). No patients were in critical condition or died. The government has enhanced border and health services and implemented surveillance systems, and 90% of the population has received the vaccine. [\[Full article\]](#)
- **South Korea's** COVID-19 patient count fell by 2% in the first week of November, compared to a sharp increase in the previous week (Yoon-Seung, 2023). The number of new cases increased to 8,578 in November, while in October, the number increased by nearly 19%. The government downgraded COVID-19 to Class 4, the lowest level, on August 31. [\[Full article\]](#)

COVID-19 Regional Update

- **Philippines:** The Department of Health reported 153 new COVID-19 cases, increasing the nationwide caseload to 4,121,129 (Untalan, 2023). Active cases rose slightly to 2,792, while recoveries increased to 4,051,591. Deaths remained at 66,746. The National Capital Region had the most cases in 14 days. 3,049 individuals took COVID-19 tests on November 7. [\[Full article\]](#)

Mpox Cases Reported Globally

January 1 – November 09, 2023

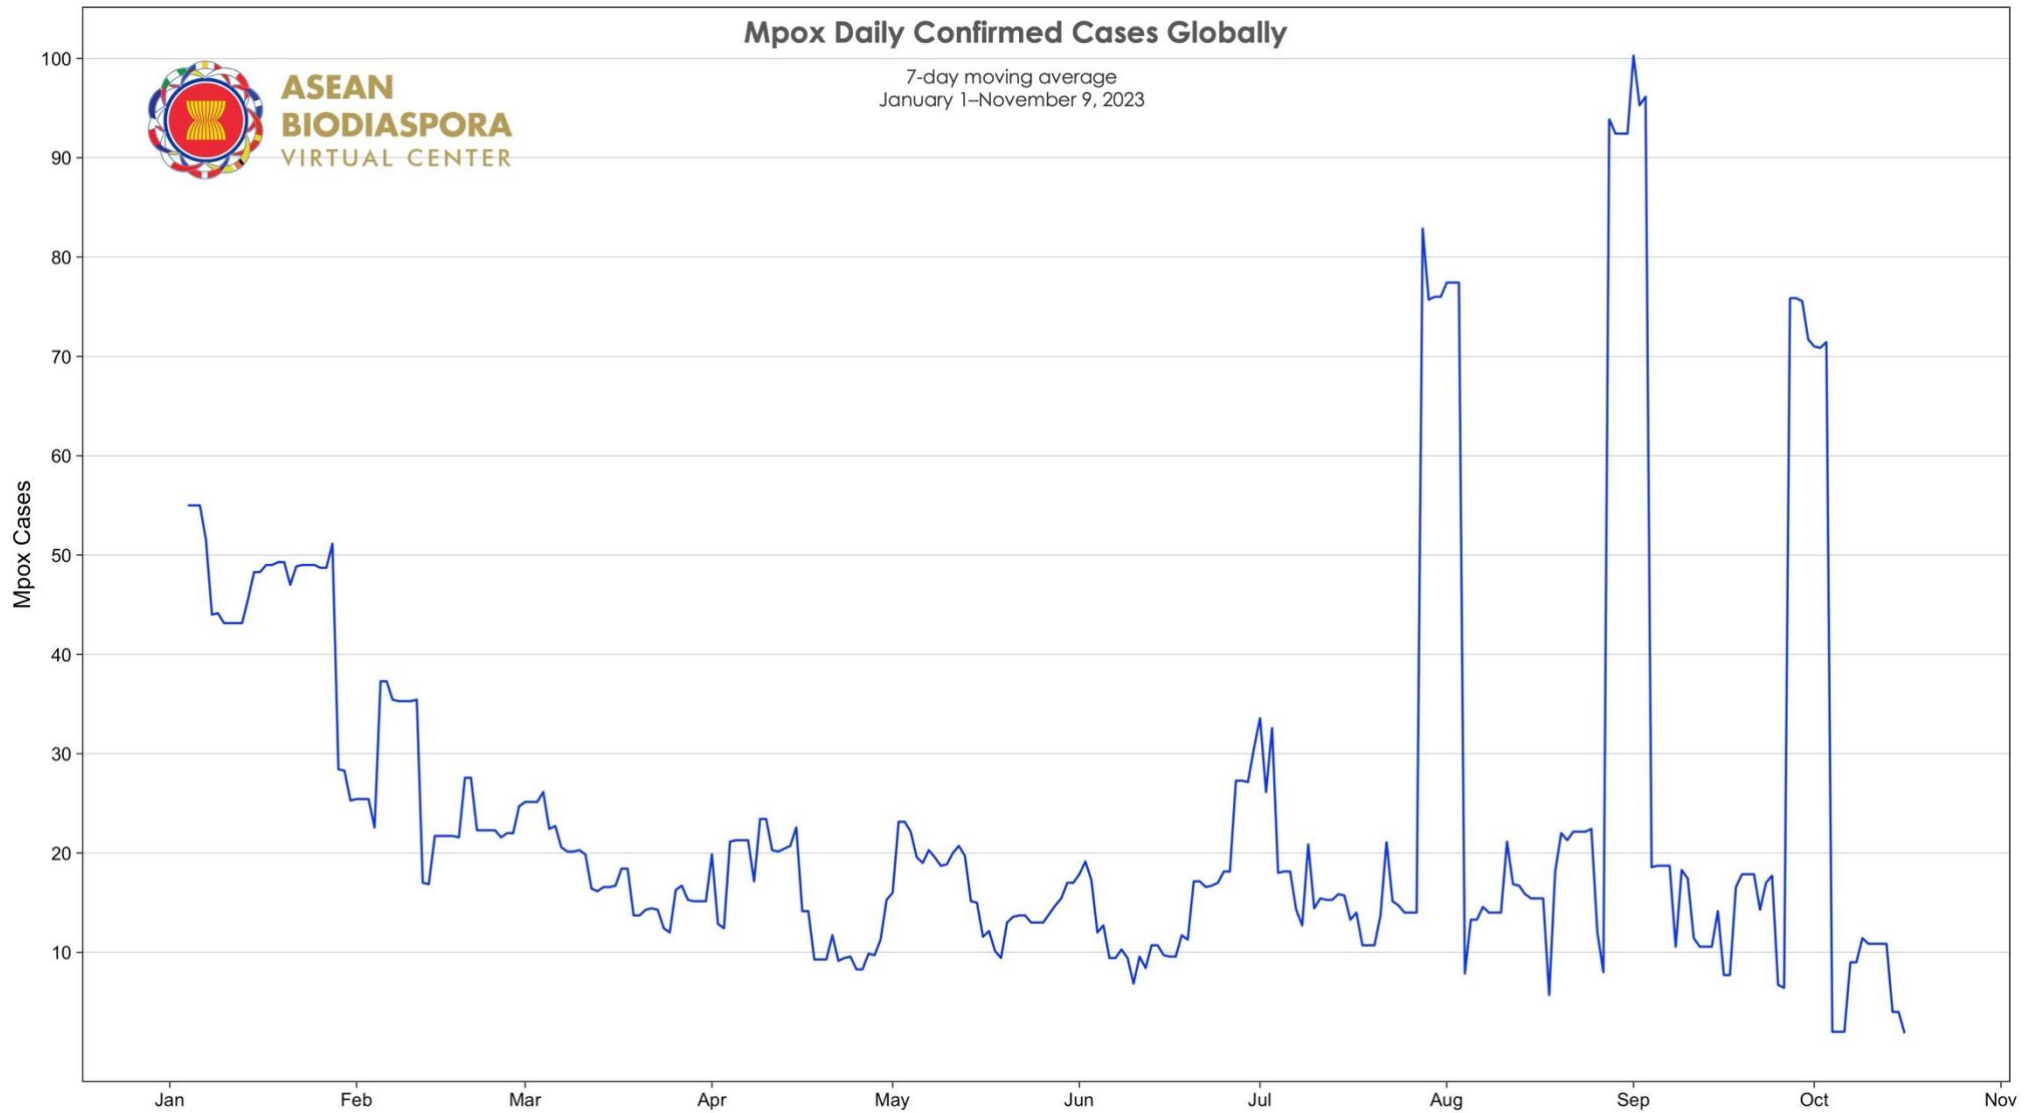

World Health Organization. "2022-23 Mpox (Monkeypox Outbreak Global Trends," accessed November 09, 2023, https://worldhealthorg.shinyapps.io/mpox_global/.

Mpox Daily Trend Globally

January 1 – November 09, 2023

Edouard Mathieu et al., "Mpox (Monkeypox)," Our World in Data, accessed November 02, 2023, <https://ourworldindata.org/monkeypox>.

Mpox: Highlights and Situation Overview

- From 01 January to 09 November 2023, there were **7,290** confirmed cases worldwide in 2023, including **93** deaths. Globally, the CFR was **1.28%**.
- 652 confirmed cases** including **2 deaths** in the **ASEAN** region in 2023, with a CFR of **0.32%**.
- 6,616 confirmed cases** of mpox have been reported in **other regions** in 2023 (other than the ASEAN region):

Mpox cases in the ASEAN Region (Jan. 1 to Nov. 09, 2023)

ASEAN Member States	Cumulative Cases 2023	New Cases Since Previous Report	Cumulative Deaths 2023	CFR
Indonesia	38	12	-	0.00%
Lao PDR	1	-	-	0.00%
Malaysia	2	-	-	0.00%
Philippines	1	-	-	0.00%
Singapore	16	-	-	0.00%
Thailand	559	-	1	0.18%
Vietnam	35	-	1	2.86%
ASEAN Total	652	12	2	0.32%

Top 5 countries with the most Mpox cases globally (Jan. 1 to Nov. 09, 2023)

Country	Cumulative Cases 2023	New Cases Since Previous Report	Cumulative Deaths	CFR
People's Republic of China	1,482	0	0	0.00%
United States of America	1,077	0	35	3.25%
Democratic Republic of Congo	610	0	2	0.33%
Thailand	559	0	1	0.18%
Brazil	456	0	2	0.44%

Mpox cases per Region

REGION	CUMULATIVE CONFIRMED CASES (JAN. 1 – NOV. 2, 2023)	NEW CASES SINCE THE PREVIOUS REPORT	CUMULATIVE DEATHS 2023	CFR
AFRICA	766	0	7	0.91%
AMERICAS	3,160	0	82	2.59%
ASEAN	652	12	2	0.31%
ASIA & OCEANIA	2,174	0	0	0.00%
EUROPE	516	0	2	0.39%
TOTAL	7,268	12	93	1.28%

Mpox Global Updates

- **People's Republic of China:** The Center for Disease Control (CDC) has reported the first death case of mpox in China, a case which occurred due to a patient who had not received the vaccine (Yiying, 2023). The patient, a Chinese male in his 30s, had developed symptoms in August but did not seek medical treatment until September 11. His poor immune status led to opportunistic diseases and HIV infection. The patient's condition worsened on October 22 and he passed away on November 1. The CDC urges people who have sexual intercourse to get tested for HIV at least once; those who have sex without condoms should get screened at least once a year; those who engage in high-risk behaviors, screened every 3 to 6 months. As of November 6, 108,860 people have been vaccinated with the mpox vaccine, with 39,558 receiving two doses and 29,744 receiving one. The CDC also encourages the public to implement self-protection, avoid social activities, and pay attention to their symptoms. [\[Full article\]](#)

Mpox Regional Updates

- **Indonesia** has reported 46 confirmed cases of mpox, with all cases being male (Diahwahyuningtyas and Pratiwi, 2023). The majority of cases are in Jakarta, with the majority of cases being male. The majority of cases are dominated by the sexual orientation of men (MSM), with 24 cases or 90% of the total cases. The disease can be transmitted through direct contact with bodily fluids or skin lesions. Symptoms include fever over 38 degrees Celsius, skin rash, enlarged lymph nodes, muscle ache, difficulty swallowing, diarrhea, and genital inflammation. As of November 7, 2023, 38 mpox cases in Indonesia have been reported, with the majority of transmission occurring through sexual intercourse (Ansori, 2023). Minister of Health Budi Gunadi Sadikin emphasized the importance of good sexual relations and the limited availability of mpox vaccinations for certain groups. [\[Full article \(Diahwahyuningtyas and Pratiwi, 2023\)\]](#) [\[Full article \(Ansori, 2023\)\]](#)
