COVID-19: Highlights and Situation Overview

Global Updates

- **Worldwide**, over 695 million cases and over 6 million deaths have been attributed to COVID-19.
- **The Netherlands**: Report for the week of September 18 to 24, 2023, indicates a notable 14% increase in the national average viral load, as determined by sewage surveillance, compared to the previous week (National Institute for Public Health and the Environment Ministry of Health, Welfare and Sport, 2023). During the same period, the Infection Radar survey reported a slight uptick in the percentage of participants exhibiting possible COVID-19 symptoms, rising from 3.0% to 3.2% when contrasted with the preceding week. Furthermore, there was a modest 9% rise in the daily average hospital admissions of patients with SARS-CoV-2. Since July, a consistent upward trend has been evident across multiple COVID-19 metrics, encompassing viral load in sewage, the proportion of Infection Radar survey participants with relevant symptoms or positive test results, and hospital admissions. These findings underscore the ongoing dynamics of the COVID-19 situation. [\[Full article\]](#)
- **Azerbaijan**: On September 25, it was reported by the Task Force under the Cabinet of Ministers that Azerbaijan observed 229 fresh instances of COVID-19 infections during the period from September 18 to 24 (Azertag, 2023). In a positive development, 132 patients successfully recuperated during the same timeframe. The cumulative total of confirmed coronavirus cases in Azerbaijan has now reached 832,809, with 822,263 individuals having fully recovered from the virus, while 10,321 unfortunate fatalities have been recorded. Presently, 19 individuals are actively receiving treatment for the illness. [\[Full article\]](#)
- **Canada**: An increase in COVID-19 cases has been observed in Quebec, accompanied by updated insights into the virus's current behavior and recommended management strategies (CTV News, 2023). Mutsumi Takahashi recently conducted an interview with Dr. Donald Vinh, an infectious diseases expert at the MUHC, to discuss the current state of COVID-19 and provide insights into what can be anticipated in the forthcoming months. In the first week of September, There were 127,000 confirmed cases of COVID. And during that time, there were also about 560,000 people who self-reported viral respiratory symptoms, but who didn't get tested. [\[Full article\]](#)
- **USA**: On 21 September, Hampden County at Massachusetts State saw 223 confirmed COVID cases that week (Nampath, 2023). In its weekly update last Thursday, the state Department of Public Health disclosed a total of 2,700 new cases across the state. This surge in COVID-19 cases has led hospitals such as Baystate Health to revise their visitor policies, now mandating masks for visitors. [\[Full article\]](#)

Regional Updates

- **Myanmar**: On September 27, 2023, the Ministry announced 2 new cases of COVID-19 following the testing of 4,252 people within 24 hours (Myanmaritv, 2023). This represents 0.05% of the total infections, and no fatalities related to the illness have been reported as of the time of this update. [\[Full article\]](#)

Mpox Cases Reported Globally

January 1 – September 26, 2023

World Health Organization. "2022-23 Mpox (Monkeypox Outbreak Global Trends," accessed September 26, 2023, https://worldhealthorg.shinyapps.io/mpx_global/.

Mpox Daily Trend Globally

January 1 – September 26, 2023

Edouard Mathieu et al., "Mpox (Monkeypox)," Our World in Data, accessed September 26, 2023, <https://ourworldindata.org/monkeypox>.

Mpox: Highlights and Situation Overview

- From 01 January to 26 September 2023, there were **6,505** confirmed cases worldwide in 2023, including **83** deaths. Globally, the Case Fatality Rate (CFR) was **1.28%**.
- 403 confirmed cases** including **1 death** in the ASEAN region in 2023, with a CFR of **0.25%**.
- 6,102 confirmed cases** of mpox have been reported in other **5 regions** in 2023 (other than the ASEAN region):

Mpox cases in the ASEAN region (Jan. 1 to Sep. 26, 2023)

Country	Cumulative Cases 2023	New Cases Since Previous Report	Cumulative Deaths	Case Fatality Rate (CFR)
Malaysia	2	-	-	0.00%
Philippines	1	-	-	0.00%
Singapore	10	3	-	0.00%
Thailand	387	74	1	0.26%
Vietnam	2	1	-	0.00%
ASEAN Total	403	78	1	0.25%

Mpox cases in the Asia-Pacific region (Jan. 1 to Sep. 26, 2023)

Country/Territory	Cumulative Cases 2023	New Cases Since Previous Report	Cumulative Deaths	Case Fatality Rate (CFR)
Australia	12	1	-	0.00%
India	2	-	-	0.00%
Japan	196	8	-	0.00%
Nepal	1	-	-	0.00%
New Zealand	2	1	-	0.00%
People's Republic of China*	1,477	31	-	0.00%
Republic of Korea	137	-	-	0.00%
Sri Lanka	2	-	-	0.00%
Asia Pacific Total	1,828	41	0	0.00%

*People's Republic of China – including Hong Kong (SAR), Macao (SAR), and Taiwan (Province of China)

Top 5 countries with the most mpox cases globally (Jan. 1 to Sep. 26, 2023)

Country	Cumulative Cases 2023	New Cases Since Previous Report	Cumulative Deaths	Case Fatality Rate (CFR)
People's Republic of China	1,144	5	0	0.00%
United States of America	1,033	26	30	2.90%
Democratic Republic of Congo	610	0	2	0.33%
Brazil	456	0	2	0.44%
Mexico	425	1	26	6.12%

Mpox cases per region

REGION	CUMULATIVE CONFIRMED CASES (JAN. 1 – SEP. 26, 2023)	NEW CASES SINCE THE PREVIOUS REPORT	CUMULATIVE DEATHS	CASE FATALITY RATE
AFRICA	756	5	5	0.66%
AMERICAS	3,107	30	75	2.41%
ASEAN	403	78	1	0.25%
ASIA PACIFIC	1,828	41	-	0.00%
EUROPE	399	7	2	0.50%
MIDDLE EAST	12	1	-	0.00%
TOTAL	6,505	162	83	1.28%

World Health Organization. "2022-23 Mpox (Monkeypox Outbreak Global Trends," accessed September 26, 2023, https://worldhealthorg.shinyapps.io/mpox_global/.

Global Updates

- **Australia:** On September 22, 2023, a monkeypox (mpox) case was confirmed in WA, involving a traveler who had recently returned from abroad (Department of Health, Western Australia, 2023). While the risk to the general public posed by this traveler is minimal, individuals are encouraged to remain vigilant about the potential for monkeypox when embarking on international journeys. It's noteworthy that there has been a 25% surge in global monkeypox cases over the past three weeks, particularly in the Western Pacific and Southeast Asia areas. [\[Full article\]](#)
- **People's Republic of China:** In response to the increasing number of cases, China has officially categorized mpox, formerly referred to as monkeypox, as a Class B infectious disease (Tong, 2023). This classification comes from both the National Health Commission and data collected by the Chinese Centre for Disease Control and Prevention (CDC). Notably, the majority of these infections are observed in males and are associated with sexual transmission. [\[Full article\]](#)

Regional Updates

- **Thailand:** According to the latest report by the Department of Disease Control (DDC), Thailand has recorded a total of 385 mpox infections within the current year, up to September 18, resulting in a single fatality (Nation Thailand, 2023). The individual who passed away was immunocompromised. Among the 42 cases reported this week, the vast majority were males, with 41 male cases and one female case. Among the infected individuals, 38 were Thai nationals, while three were foreigners. Out of the new cases, 33 have been identified in the male-to-male transmission group, and 17 have reported a history of engaging in risky sexual contact. Furthermore, 29 of the newly reported cases were also found to be HIV-positive. [\[Full article\]](#)
